

What the invention claimed is:

1. A writing apparatus comprising:

a pen body, said pen body having a receiving portion in the periphery thereof adapted to accommodate a show item; and

5 a transparent socket capped on said pen body and forming with said receiving portion a show window adapted to hold and protect a shown item.

2. The writing apparatus as claimed in claim 1, wherein said receiving portion is a recess.

10 3. The writing apparatus as claimed in claim 1, wherein said pen body comprises a springy retaining stub rod protruded from a spring strip thereof adapted to lock said transparent socket; said transparent socket comprises a retaining hole adapted to receive said springy retaining stub rod.

15 4. The writing apparatus as claimed in claim 3, further comprising a guide structure adapted to guide the retaining hole of said transparent socket into engagement with the springy retaining stub rod of said pen body.

20 5. The writing apparatus as claimed in claim 4, wherein said guide structure comprises a guide rod protruded from the periphery of said pen body, and a sliding groove longitudinally formed in an inside wall of said transparent socket and adapted to receive said guide rod.

25 6. The writing apparatus as claimed in claim 4, wherein said guide structure comprises a guide rod protruded from an inside wall of said transparent socket, and a sliding groove longitudinally formed in

the periphery of said pen body and adapted to receive said guide rod.
